Happy New Year everyone! 2022 is the Year of the Tiger. And whether the economy is tiger-like this year or perhaps more akin to a tabby remains to be seen. Either way, there are some key trends that we will be closely watching this year that will go a long way to determining how the economy fares.

First up, we are watching how the housing market fares as it butts up against rising interest rates. Recall that our view is that interest rates are the chief determinant of changes in house prices. So the rapid run-up in prices as interest rates fell over 2020 and 2021 ought to change course as interest rates rise.

Already we have seen a big rise in mortgage rates over the last few months of 2021, and the December sales figures out last week gave us the first clear steer that that's having the expected impact. The number of house sales has dropped back, with sales down around 8% for the month and nearly 30% on a year ago. And sale prices actually fell (-0.5%) for the month. That's the first time that has happened since the Covid lockdown in 2020.

Specifically, we've been predicting that as mortgage rates rise, we'll see moderate price declines kick in from the second half of this year, continuing through into 2023. However, the timing of that turnaround has always been fluid, and if it turns out to be sooner, then we're still comfortable with the direction of our forecast.

Secondly, inflation is also going grab its share of economic headlines this year. Indeed, the December quarter Consumers Price Index data due this week are likely to raise a few eyebrows. We expect the quarter to show an annual inflation rate of 5.7%, which would be highest rate in 31 years.

Where the RBNZ worries about inflation is not just when prices go up (or surge in this case), but when high inflation becomes entrenched. And for that to happen, you really need wage inflation to come to the party. So a key question is: will 2022 finally be the year of big pay increases?

There's every reason to think so. Businesses are crying out for workers. Last week's Quarterly Survey of Business Opinion was a case in point. Firms reported that labour shortages were the single biggest constraint on growth.

Workers are in the best position in a long time to negotiate a pay rise, or alternatively to switch to a higher-paying job. Yet the evidence so far that this is happening is patchy. Our employment confidence survey, also published last week, found that both current and expected earnings growth remains relatively low.

And while hard wage data has shown a recent uptick, wage growth is still running at historically modest levels.

Why is that? Maybe there's something different about the Covid environment, or maybe it's just a matter of time before the proof comes through. For now we are in the latter camp, but either way, wage growth is going to be one of the key economic variables to watch this year.

Finally, Covid is going to continue to throw curve balls at the economy over 2022 whether we like it or not. It was only a matter of time before omicron made its way into the community, and as it takes hold its prevalence is likely to exceed anything that we've seen in this country so far in the pandemic.

The Australian experience offers some insights. There, case numbers surged to record highs to the point that testing capacity was unable to cope. And while not as severe as previous strains, the sheer numbers have overwhelmed hospitals in some of the harder hit states.

In an economic sense, omicron has also taken Australian businesses by surprise. Notably, essential services like food are struggling to cope with sick or isolating workers off work right across the supply chain. This has resulted in shortages of a larger number of locally-produced goods for the first time during the pandemic, whereas previously most shortages centred on imported goods.

From the New Zealand perspective, to date essential industries like food have been a source of stability and economic strength. And while we don't think that is going to change at a high level, we do expect Covid to continue to throw up fresh challenges over the course of the year.

All up, there's plenty going on in the economy and it's as dynamic as ever. With the above in mind, it pays to stay informed and indeed watch this space.

### **Chart of the week**

One key aspect of this inflation surge is that it is coming from all sides. Supply side constraints such as labour and material shortages are well-publicised. But what is not reported as often is surging demand. The chart above shows how this perfect inflation storm has been put together. Importantly, it has meant that as firms have faced cost increases they have been comfortable lifting their prices, knowing that demand is sufficiently strong to absorb any price lifts.

#### Factors constraining business activity

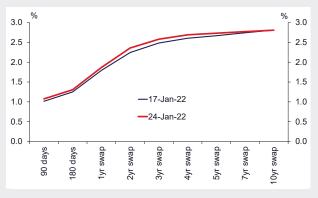

# **Fixed vs floating for** mortgages

We expect the Reserve Bank to increase the OCR further at its upcoming reviews, reaching a peak of 3% by mid-2023.

Based on these OCR forecasts, we think there is value in extending fixed-rate terms as far out as three years. Longer terms (out to five years) don't offer additional value, though they may be suitable for borrowers who value more certainty in their repayments.

#### NZ interest rates

### The week ahead

#### NZ Q4 consumer price index

Jan 27, Last: 2.2%, WBC f/c: 1.2%, Mkt f/c: 1.3%, Range: 0.9% to 1.7%

We expect a 1.2% rise in the CPI in the December quarter. That would see annual inflation rising to 5.7%, up from an annual rate of 4.9% last quarter and the highest annual inflation rate in 31 years.

There's been particularly large increases in construction prices and transport costs. However, inflation pressures are widespread, boosted by supply-side pressures and strong domestic demand.

Our forecast is in line with the RBNZ's last set of published forecasts.

With significant Covid disruptions occurring, we could see some large swings in prices this quarter, both up and down. However, smoothing through that quarter-to-quarter volatility, the underlying trend in inflation is set to remain very strong over 2022.

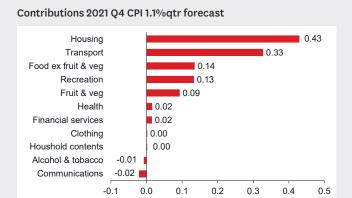

#### **Aus Q4 Consumer Price Index**

Jan 25 Last: 0.8%, WBC f/c: 1.1% Mkt f/c: 1.0%, Range: 0.8% to 1.2%

The Q3 CPI came as expected lifting 0.8% vs. Westpac and market forecast of 0.8%. The big surprise was the 0.7% rise in the trimmed mean taking the annual pace to 2.1%yr. The most significant price rises were for new dwelling purchase by owner-occupiers 3.3% and auto fuel 7.1%. For dwelling prices the ABS reported a surprising 3.0% rise in the underlying price before the grants.

Westpac is forecasting a 1.1% rise in the December quarter CPI. The annual pace lifts from 3.0%yr to 3.2%yr. Core inflation, as measured by the trimmed mean, is set to rise 0.7% lifting the annual pace from 2.1%yr to 2.4%yr. The six month annualised pace of core inflation is forecast to accelerate from 2.4%yr to 2.9%yr.

Housing makes the largest contribution (0.43ppt), transport makes the next largest with 0.26ppt and food is not far behind with a 0.23ppt contributing.

Source: ABS, Westpac Economics

ppt contrib. to the quarter

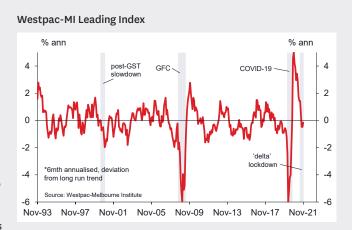

#### **Aus Dec Leading Index**

Jan 27, Last: -0.2%

The six-month annualised growth rate rose to -0.2% in November from -0.5% in October, remaining in negative, below trend, territory for a third consecutive month.

Weakness mainly reflects the lockdowns in NSW and Victoria. With these coming to an end in October-November, the growth pulse should lift in December although this will likely be partially offset by omicron impacts on consumer sentiment.

The new monthly read will include positive updates on the ASX200 (up 2.6%); commodity prices (up 3.3% in AUD terms); dwelling approvals (up 3.6%); and total hours worked (up 1% after a very strong 4.5% rebound in Nov). Against this, the Westpac-MI Consumer Expectations Index deteriorated 6.1% and the Westpac-MI Unemployment Expectations Index deteriorated 8.2%. More omicron-related slowing effects are likely to emerge in early 2022.

#### Investment recommendations disclosure

The material may contain investment recommendations, including information recommending an investment strategy. Reasonable steps have been taken to ensure that the material is presented in a clear, accurate and objective manner. Investment Recommendations for financial Instruments covered by MAR are made in compliance with Article 20 MAR. Westpac does not apply MAR Investment Recommendation requirements to Spot Foreign Exchange which is out of scope for MAR.

Unless otherwise indicated, there are no planned updates to this Investment Recommendation at the time of publication. Westpac has no obligation to update, modify or amend this Investment Recommendation or to notify the recipients of this Investment Recommendation should any information, including opinion, forecast or estimate set out in this Investment Recommendation change or subsequently become inaccurate.

Westpac will from time to time dispose of and acquire financial instruments of companies covered in this Investment Recommendation as principal and act as a market maker or liquidity provider in such financial instruments.

Westpac does not have any proprietary positions in equity shares of issuers that are the subject of an investment recommendation.

Westpac may have provided investment banking services to the issuer in the course of the past 12 months.

Westpac does not permit any issuer to see or comment on any investment recommendation prior to its completion and distribution.

Individuals who produce investment recommendations are not permitted to undertake any transactions in any financial instruments or derivatives in relation to the issuers covered by the investment recommendations they produce.

We stpac has implemented policies and procedures, which are designed to ensure conflicts of interests are managed consistently and appropriately, and to treat clients fairly.

The following arrangements have been adopted for the avoidance and prevention of conflicts in interests associated with the provision of investment recommendations.

- Chinese Wall/Cell arrangements;
- physical separation of various Business/Support Units;
- (iii) and well defined wall/cell crossing procedures;
- (v) documented and well defined procedures for dealing with conflicts of interest;
- steps by Compliance to ensure that the Chinese Wall/Cell arrangements remain effective and that such arrangements are adequately monitored.

U.S: Westpac operates in the United States of America as a federally licensed branch, regulated by the Office of the Comptroller of the Currency. Westpac is also registered with the US Commodity Futures Trading Commission ("CFTC") as a Swap Dealer, but is neither registered as, or affiliated with, a Futures Commission Merchant registered with the US CFTC. Westpac Capital Markets, LLC ("MCM"), a wholly-owned subsidiary of Westpac, is a broker-dealer registered under the U.S. Securities Exchange Act of 1934 ("the Exchange Act") and member of the Financial Industry Regulatory Authority ("FINRA"). This communication is provided for distribution to U.S. institutional investors in reliance on the exemption from registration provided by Rule 15a-6 under the Exchange Act and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors in the United States. WCM is the U.S. distributor of this communication and accepts responsibility for the contents of this communication. All disclaimers set out with respect to Westpac apply equally to WCM. If you would like to speak to someone regarding any security mentioned herein, please contact WCM on +1 212 389 1269. All disclaimers set out with respect to Westpac apply equally to WCM.

Investing in any non-U.S. securities or related financial instruments mentioned in this communication may present certain risks. The securities of related manaria instruments inentioned in this communication may present certain risks. The securities of non-U.S. issuers may not be registered with, or be subject to the regulations of, the SEC in the United States. Information on such non-U.S. securities or related financial instruments may be limited. Non-U.S. companies may not subject to audit and reporting standards and regulatory requirements comparable to those in effect in the United States. The value of any investment or income from any securities or related derivative instruments denominated in a currency other than U.S. dollars is subject to exchange rate fluctuations that may have a positive or adverse effect on the value of or income from such securities or related derivative instruments.
